The sequences given in ABB80222-28 represent lethal toxin neutralising factor (LTNF) peptides which may be used for reducing elevated levels of serum proteins selected from immunoglobulin E (19E), nerve growth factor (NGF), insulin, myoglobin and/or adenosine deaminase (ADA). In particular, the methods of the invention are useful for diagnosing and treating conditions with elevated serum IGE levels, e.g. asthma, diabetes, autoimmune disease (e.g. erythematocaus (SLEE), rheumatodia chapters, Siogran's syndrome, Reliev's syndrome, Graves' disease, Addison's disease or Hodgkin's disease) or depression. The efficacy of the protein may be monitored by assaying a human endogenous protein by performing an enzyme-linked immunosorbent assay (ELISA) on a saliva sample using an anti-serum that is specific for the protein. Saliva collection is relatively non-invasive when compared to blood collection for sample using an anti-serum that is specific for the protein. Saliva collecting time before centrifugation to separate serum. Saliva proteins can be assayed by a simple ELISA test, whereas how a proteins from the assayed by a simple ELISA test, whereas an assay of proteins from serum requires a more complicated sandwich type ELISA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Nucleic acids encoding polypeptides with cytokine-like activities, useful
in diagnosis and gene therapy.

                                The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to oytokine, call proliferation or cell differentiation or which may induce production of other cytokines in other cell propulations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, immunomodulatory activity and activity, tissue growth factor activity, immunomodulatory activity and activity inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leuksemia, nervous system disorders, arthritis and inflammation. Note: Records for SDO ID NO 2110 (AAK52581), 2111 (AAK52882) and 3666 (AAM80020) are omitted as the relevant pages from the sequence listing were missing at the time of publication
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a unicellular organism for producing a diterpene or diterpene precursor comprising an exogenous nucleic acid sequence encoding a geranylgeranyl pyrophosphate synthase under the control of a promoter operable in the organism, and an exogenous nucleic acid sequence encoding a diterpene synthase under the control of a promoter operable in the organism. The invention also relates to methods of producing a diterpene or diterpene precursor and a method of isolating a diterpene synthase comprising growing several cells in the presence of a polyaromatic resin to make a cell/resin mixture, where at least one of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ø
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Geranylgeranyl pyrophosphate synthase; diterpene; diterpene precursor; diterpene synthase; defence toxin; volatile defensive signal; pollinator attractant; photoprotectant; HMG-CoA reductase; enzyme.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New unicellular organisms comprising exogenous nucleic acids encoding geranylgeranyl pyrophosphate and a diterpene synthase, useful for producing diterpenes and diterpene precursors.
                                                                                                                                                                                                                                                                                                                                                                                               Gaps

                                       conditions where the expression is induced, filtering the cell/resin mixture, extracting the cell/resin mixture, extracting the cell/resin mixture with alcohol to produce an organic eluent and analysing the organic eluent by a screening method including chromatography and/or spectroscopy, to identify the nucleic microorganism is useful as a diterpene synthase. The unicellular microorganism is useful as a diterpene or diterpene precursor producing system. Diterpenes, in plants, serve as defence toxins, volatile defensive signals, pollinator attractants and photoprotectants. This sequence represents an info-oA reducease polypeptide used in the scope of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       protein associated factor; dTAFISO; screening; diagnostic; gene transcription regulation.
             acid sequence of a yeast expression library, and the expression of the nucleic acid sequence is regulated by an inducible promoter under
 cells further comprises at least one isolated and purified nucleic
                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                              ;

The TATA-binding protein associated factor hTAFISO (including specific antibodies and fusion products) are used in drug screening, diagnostics and therapeutics. They are used in the development of specific biochemical assays for screening compounds that agonise or antagonise selected transcription factors involved in regulating gene expression associated with human pathology. (Updated on 25-MAR-2003 to correct PN field.)

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   US-08-58/163A-1959.

Sequence 1, Application US/08657163A
Patent No. 574449

GENERAL INPORMATION:

APPLICANT: BINIE V. LIPPS AND FREDERICK W. LIPPS
TITLE OF INVENTION: EMBODIMENTS OF NATURAL AND
TITLE OF INVENTION: SYMTHETIC LITRES AND THEIR
TITLE OF INVENTION: UTLLITY AS TREATMENT FOR ENVENOMATION
NUMBER OF SEQUENCES: 3
CORRESPONDENCE ADDRESS:
ADDRESSEE: BINIE V. LIPPS
STREET: 4509 MIMOSA DR.
CITTLE OF THE VALUE OF SEQUENCES: 3
CORNETRY: USA
ZIPE TEXAS
COUNTRY: USA
ZIPE: 77401
COMPUTER: EMADABLE FORM:
MEDIUM TYPE: 3.5" FLOPPY DISK, 1.44 MB
COMPUTER: MS CONFATIBLE
OCHERATING SYSTEM: MS-DOS 5.0/WINDOWS 3.1
CORPUTER: MS MORD 2.0
CURRENT APPLICATION DATA:
CLASSIFICATION NUMBER: US/08/657,163A
FILING DATE: 12 SEPTEMBER 1994
CLASSIFICATION NUMBER: 08/310,340
FILING DATE: 10 MAX 1993
ATTORNEY/AGENT INFORMATION:
MAME: JOHN R. CASPERSON
RECISTRATION NUMBER: 28,198
REFERENCE/DOCKET NUMBER: 22,561
TELEPHONE FERENCE TITLE THE MAY 1993
ATTORNEY/AGENT INFORMATION:
TELECOMMUNICATION NUMBER: EMI-PAT-US-011
TELECOMMUNICATION NUMBER: FWL-PAT-US-011
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Length 15;

Sequence 5938, Application US/09134000C

Patent No. 6617156

GENERAL INFORMATION:

APPLICANT: Lynn Doucette-Stamm et al

TITLE OF INVENTION: ENTEROCOCCUS FAECALIS FOR DIAGNOSTICS AND THERAPEUTICS

FILE REPERENCE: 032796-032

CURRENT FILING DATE: 1998-08-13

PRIOR APPLICATION NUMBER: US 60/055,778

PRIOR APPLICATION NUMBER: US 60/055,778

PRIOR FILING DATE: 1997-08-15

NUMBER OF SEQ ID NOS: 6812

SOFTWARE: Patentin version 3.1

SEQ ID NO 5938

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 42, Application US/07857224B
Patent No. 5958784
GENERAL INFORMATION:
APPLICANT: Benner, Steven A.
TITLE OF INVENTION: Predicting Folded Structures of Proteins
NUMBER OF SEQUENCES: 114
CORRESPONDENCE ADDRESS:
ADDRESSEE: Steven A. Benner
STREET: Hallaubstrasse 151
CITY: Zurich

Sequence 16548, Application US/09902540

Patent No. 6833447

GENERAL INFORMATION:

APPLICANT: Goldman, Barry S.

APPLICANT: Hinkle, Gregory J.

APPLICANT: Wieganch C.

TITLE OF INVENTION: Myxococcus xanthus Genome Sequences and Uses Thereof TIER REFERENCE: 38-10(15849) B

CURRENT APPLICATION UNDER: US/09/902,540

CURRENT FILING DATE: 2001-07-10

PRIOR PLICATION NUMBER: 60/217,883

PRIOR FILING DATE: 2000-07-10

PRIOR FILING DATE: 2000-07-10

LENGTH: 557

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Gaps

have been studied kinase C and other kinases,

```
A.Pescription: catalyzes the formation of specific peptidyl-threonine-phosphate and pept A.Pesthway: MAP kinase cascade
C.Superfamily: protein kinase A-raf; protein kinase C zinc-binding repeat homology; prof C.Superfamily: protein kinase A-raf; protein kinase C zinc-binding repeat homology «KIN»
F.139-184/Domain: protein kinase C zinc-binding repeat homology «KIN»
F.355-363/Region: protein kinase APP-binding motif
F.347-613/Domain: protein kinase APP-binding motif
F.355-363/Region: protein kinase APP-binding motif
F.355-363/Region: protein kinase APP-binding motif
F.355-81/Binding site: phosphate (Ser) (covalent) #status predicted
F.159,165,173,176/Binding site: zinc (His, Cys, Cys, His, Cys) #status predicted
F.259/Binding site: phosphate (Thr) (covalent) (by protein kinase C) #status experiments
F.268/Binding site: phosphate (Thr) (covalent) (by autophosphorylation) #status experiments
F.358/Active site: Lys #status predicted
F.499/Binding site: phosphate (Ser) (covalent) (by protein kinase C) #status
A;Title: Identification of the major phosphorylation sites of the Raf-1 kinase. A;Reference number: A43089; MUID:93352516; PMID:8349614
A;Contents: annotation; phosphorylation sites
A;Note: expression is ubiquitous in mammalian tissues that have been studied
C;Comment: After phosphorylation and activation by protein kinase C and other k

A, Pathway: MAP kinase cascade
A, Note: expression is ubiquitous in mammalian tissues that have been studied
C, Superfamily: protein kinase A-raf; protein Kinase C zinc-binding repeat homology; prot
C, Keywords: AFP; autophosphorylation; phosphoprotein; phosphorransferase; prote-oncogene
F,139-184/Domain: protein kinase C zinc-binding repeat homology «KZN»
F,355-363/Region: protein kinase APP-binding motif
F,347-613/Domain: protein kinase APP-binding motif
F,355-363/Region: protein kinase APP-binding motif
F,355/Reinding site: phosphate (Ser) (covalent) (by protein kinase C) #status predicted
F,259/Binding site: phosphate (Ser) (covalent) (by autophosphorylation) #status predicted
F,357/Active site: phosphate (Ser) (covalent) (by protein kinase C) #status predicted
F,399/Binding site: phosphate (Ser) (covalent) (by protein kinase C) #status predicted
F,499/Binding site: phosphate (Ser) (covalent) (by autophosphorylation) #status predicted
F,499/Binding site: phosphate (Ser) (covalent) (by autophosphorylation) #status predicted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ';Accession: A26126 "Control of Control of C

protein kinase raf-1 (EC 2.7.1.-) - African clawed frog
NALernate names: Kinase-related transforming protein raf-1; raf-1 proto-oncogene prote
C;Species: Xenopus laevis (African clawed frog)
C;Date: 30-Jun-1991 #sequence_revision 30-Jun-1991 #text_change 09-Jul-2004
C;Accession: 801930; ISI254

-!- CATALYTIC ACTIVITY: A protein = ADP + a phosphoprotein.
-!- MISCELLANEOUS: This protein is synthesized as a Gag-Mht or Gag-Mil
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          "Nucleotide sequence of avian retroviral oncogene v-mil: homologue of

Assaying a human endogenous protein (e.g. IgB, nerve growth factor, insulin or adenosine deaminase or myoglobin), useful for diagnosing e.g. asthma or diabetes, by employing an ELISA on a saliva sample from a patient.

Claim 7; Page 4; 24pp; English.

The sequences given in ABB80222-28 represent lethal toxin neutralising factor (LTNF) peptides which may be used for reducing elevated levels of serum proteins selected from immunoglobulin B (IgB), nerve growth factor (NGF), insulin, myoglobin and/or adenosine deaminase (ADA). In particular, the methods of the invention are useful for diagnosing and treating conditions with elevated serum IgE levels, e.g. asthma, diabetes, autoimmune disease (e.g. erythematosus (SLE), rheumatoid

performing an enzyme-linked immunosorbent assay (ELISA) on a saliva sample using an anti-serum that is specific for the protein. Saliva collection is relatively non-invasive when compared to blood collection for serum. Saliva can be centrifuged immediately, whereas blood requires clotting time before centrifugetion to separate serum. Saliva proteins can be assayed by a simple ELISA test, whereas an assay of proteins serum requires a more complicated sandwich type ELISA

                                                                                                                                                                                                                                                           셤
```

```
This sequence represents the peptide of the invention. It is a Lethal Toxin Neutralising Factor (LTNF) moiety from a 68 kDa anti-haemorrhagic protein derived from an opossum. The peptide can be used in a method for treating a victim of envenometion from a poisonous snake, preferably a poisonous snake from the family of Elapidee, Viperidae or sea snake. It is useful for the treatment of snake bites, sepsis, allergies caused by the environment and treatment of be or scorpion stings or toxicities caused by plant or bacterial toxins. The peptide can also be used in histamine reaction treatment. The peptide can be used in envenomation treatment for a variety of snakes without prior identification of the snake. Being short it can be synthetically prepared rather than the current production in horses, where some people can show hypersensitivity
                                                                                                                LTNF; lethal toxin neutralising factor; opossum; envenomation; therapy; anti-haemorrhagic protein; Elapidae; Viperidae; sea snake; snake bite; sepsis; allergy; bee sting; scorpion sting; plant toxin; bacterial toxin;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Lethal Toxin Neutralising Factor peptide from opossum - can neutralise venom(s) from all major families of poisonous snakes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 7; Col 11; 11pp; English.

Claim 7; Page 4; 24pp; English.

patient,

The sequences given in ABB8022-28 represent lethal toxin neutralising factor (LTNF) peptides which may be used for reducing elevated levels of serum proteins selected from immunoglobulin E (IgE), nerve growth factor (NGF), insulin, myoglobin and/or adenosine deaminase (ADA). In particular, the methods of the invention are useful for diagnosing and treating conditions with elevated serum IgE levels, e.g. asthma, diabetes, autoimmune disease (e.g. erythematosus (SLE), rheumatoid arthritis, Sjogren's syndrome, seliter's syndrome, Graves' disease, Addison's disease or Hodgkin's disease) or depression. The efficacy of the protein may be monitored by assaying a human endogenous protein by

The sequences given in ABB80222-28 represent lethal toxin neutralising factor (LTMF) peptides which may be used for reducing elevated levels of serum proteins selected from immunoglobulin E (1gE), nerve growth factor (NGF), insulin, myoglobin and/or adenosine deaminase (ADA). In particular, the methods of the invention are useful for diagnosing and treating conditions with elevated serum IGE levels, e.g. asthma, diabetes, autoimmune disease (e.g. erythematosus (SLE), rheumatoid arthritis, Sjogren's syndrome, Reiter's syndrome, Graves' disease, the protein may be monitored by assaying a human endogenous protein by performing an enzyme-linked immunosorbent assay (ELISA) on a saliva collection is relatively non-invesive when compared to blood collection of serum. Saliva can be centrifuged immediately, whereas blood requires

The sequences given in ABB80222-28 represent lethal toxin neutralising factor (LTNF) peptides which may be used for reducing elevated levels of serum proteins selected from immunoglobulin B (IgB), nerve growth factor (MCF), insulin, myoglobin and/or adenosine deaminase (ADA). In Quarticular, the methods of the invention are useful for diagnosing and treating conditions with elevated serum IgE levels, e.g. asthma, arthritis, Sjogren's syndrome, Reliter's syndrome, Graves' disease, Addison's disease or Hodgkin's disease) or depression. The efficacy of the protein may be monitored by assaying a human endogenous protein by performing an enzyme-linked immunosorbent assay (ELISA) on a saliva sample using an anti-serum that is specific for the protein. Saliva can be centrifuged immediately, whereas blood collection collection is essent. Saliva can be centrifuged immediately, whereas blood requires clotting time before centrifuged immediately, whereas blood requires contents as a simple ELISA test, whereas an assay of proteins from the contents of the protein strome contents and a sasay of proteins from the contents of the c

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                patient.
RESULT (ABB8022)
```

```
The present sequence is from the N-terminus of a 68 kD protein purified from the serum of the opossum Didelphis virginiana. The full-length protein is a lethal toxin neutralising factor (LTNF). The use of purified LTNF or of the chemically synthesised 15mer N-terminal peptide for treating victims of bee stings, scorpion stings and bacterial or plant toxins is claimed. The patent disclosure does not provide any evidence for neutralising activity against these various toxins. There is evidence of significant neutralising activity of the opossum LTNF and the liner peptide against venom from snakes of the families Crotalidae, Blaphidae, Hydrolidae and Viperidae. (Updated on 25-MAR-2003 to correct PF field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          LTNF; lethal toxin neutralising factor; opossum; envenomation; therapy; anti-haemorrhagic protein; Elapidae; Viperidae; sea snake; snake bite; sepsis; allergy; bee sting; scorpion sting; plant toxin; bacterial toxin; histamine reaction treatment.

The sequences given in ABB80222-28 represent lethal toxin neutralising factor (ITMP) peptides which may be used for reducing elevated levels of serum proteins selected from immunoglobulin B (IgB), nerve growth factor (MGF), insulin, myoglobin and/or adenosine deaminase (ADA). In particular, the methods of the invention are useful for diagnosing and treating conditions with elevated serum IgB levels, e.g. asthma, diabetes, autoimmune disease (e.g. erythematosus (SLB), rheumatoid arthritis, Sjogren's syndrome, Reiter's syndrome, Graves' disease, Addison's disease or Hodgkin's disease) or depression. The efficacy of the protein may be monitored by assaying a human endogenous protein by performing an enzyme-linked immunosorbent assay (ELISA) on a saliva collection is relatively non-invasive when compared to blood collection for serum. Saliva can be centrifugation to separate serum. Saliva can be centrifugation to separate serum. Saliva proteins can be assayed by a simple ELISA test, whereas an assay of proteins from serum requires a more complicated sandwich type ELISA
                                                                                                                                                                                                     Assaying a human endogenous protein (e.g. IgE, nerve growth factor, insulin or adenosine deaminase or myoglobin), useful for diagnosing asthma or diabetes, by employing an ELISA on a saliva sample from a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   100.0%; Score 43; DB 7; Length 15; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence represents the peptide of the invention. It is a Lethal Toxin Neutralising Factor (LTNF) moiety from a 68 kba anti-haemorrhagic protein derived from an opossum. The peptide can be used in a method for treating a victim of envenomation from a poisonous snake, preferably a poisonous snake from the family of Elapidae, Viperidae or sea snake. It is useful for the treatment of snake bites, sepsis, allergies caused by the environment and treatment of be or scorpion stings or toxicities caused by plant or bacterial toxins. The peptide can also be used in histamine reaction treatment. The peptide can be used in envenomation treatment for a variety of snakes without prior identification of the snake. Being short it can be synthetically prepared rather than the current production in horses, where some people can show hypersensitivity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Lethal toxin neutralising factor; LTNF; serum protein; immunoglobulin E; IGE; nerve growth factor; NGF; insulin; myoglobin; adenosine deaminase; ADA; asthma; diabetes; autoimmune disease; systemic lupus erythematosus; SLE; rheumatoid arthritis; Sjogran's syndrome; Reiter's syndrome; Graves' disease; Addison's disease; Hodgkin's disease; depresaion;

Sequences AAY43902-Y44015 represent proteins used in a novel method of predicting the folded structure of proteins, by aligning sequences of homologous proteins and using patterns of evolutionarily conserved and varied sequences to assign positions. Positions in the alignment are assigned to the surface or inside of the folded structure, active sites, and parsing segments. Secondary structural units are assigned by identifying periodicity in the assignments, and assembled into globular form using distance constraints imposed by disulfide bridges, active site assignments and co-variation analysis. The predicted secondary structures are useful for identifying antigenic sites on a protein molecule, as guides for site directed mutagenesis studies, and for understanding the interaction of a protein with other molecules
                                                                                                                                                                                                                                                                                                                                                                                                                                Prediction; secondary structure; alignment; evolutionary conservation; homology; periodicity; co-variation analysis; antigenic site; site directed mutagenesis; interaction.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AA000010-AA013910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynpeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activin/inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Isolated nucleic acids and polypeptides, useful for preventing diagnosing and treating e.g. leukemia, inflammation and immune disorders.
                                                                                                                                                         solid phase or soln. methods. One of 3 c-raf-1-related peptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; cytokine; cell proliferation; cell differentiation; gene therapy; vaccine; peptide therapy; stem cell growth factor; haematopoiesis; tissue growth factor; immunomodulatory; cancer; leukaemia; nervous system disorders; architits; inflammation.
                                                                   New oncogene related peptide(s) - useful in prepn. of antigen and then antibodies having specific reactivity with cancer proteins.
                                                                                                                                                                            and
                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                       among 23 claimed oncogene-related peptides.                                                                                                                                                                                                                                                                                                                                                                                   The present sequence is that of protein c-Raf-1 (amino acids 305-648). Human papillomavirus oncoprotein E7 abrogates Raf-associated arrest and prevents inhibition of cyclin E-CDK2 activity without disrupting Raf induction of p21Cip21. E7 neither interacts with p21Cip1 nor derepresses p21Cip1-associated CDK2 activity, but instead reduces the association between p21Cip1 and cyclin E-CDK2 complexes. Raf down-regulates steady-state levels of Akt, a regulator of p21Cip1 localisation, leading to loss of p21Cip1 phosphorylation and accumulation of p21Cip1. E7 disrupts the effects of Raf on Akt activity and prevents p21Cip1 nuclear accumulation. Maintenance of Akt activity is necessary and sufficient to bypass Raf arrest. The invention provides methods for identifying and using compounds capable of promoting the nuclear localization of p21Cip1. The methods can be used to inhibit aberrant cellular proliferation for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                          Identifying a compound that inhibits B7 cellular proliferation activity by administering a compound to a system, where the system maintains Akt activity and selecting a compound that decreases the amount of Akt

New nucleic acid encoding a Klebsiella pneumoniae polypeptide, useful for
preparing a vaccine composition against Klebsiella pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention describes a new isolated nucleic acid encoding a Klebsiella
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        pneumoniae polypeptide. Also described are: a recombinant expression vector comprising the nucleic acid, operably linked to a transcription regulatory element; and a cell comprising the recombinant expression vector. The nucleic acid is useful for preparing a vaccine composition against Klebsiella pneumoniae. This is the amino acid sequence of a Klebsiella pneumoniae of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; enzyme; kinase and phosphatase; KPP; cancer; cirrhosis; cell proliferative disorder; arteriosclerosis; atherosclerosis; hepatitis; parcoxyman inocturnal haemoglobinuria; polycythaemia vera; psoriasis; primary thromobocytopaenia; developmental disorder; renal tubular acidosis; anemaia mental retardation; AIDS; epilepsy; neurological disorder; Alzheimer's disease; Parkinson's disease; autoimmune disorder; inflammatory disorder; allergy; asthma; acquired immunodeficiency syndrome, autoimmune thyroiditis; contact dermatitis; Crohn's disease; diabetes mellitus; glomerulonephritis; Goodpasture's syndrome; gout; Graves' disease; glomerulonephritis; Goodpasture's syndrome; multiple sclerosis; osteoprosals; pancreatitis; Reiter's syndrome; rheumatoid arthritis; Sjogren's syndrome; uveitis; infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human kinase and phosphatase protein, KPP-3, INCYTE No.6464221CD1

The invention relates to an isolated polypeptide, which is a human kinase and phosphatase, KPP (KPP-1 to KPP-18). Also included are the encoding polymucleotides KPP MA, recombinant polymucleotides (FPP-16). Also included are the encoding polymucleotides KPP MA, recombinant polymucleotide, a transgenic organism comprising the recombinant polymucleotide, an anti-KPP antibody, screening for anti-Agonists of KPP, microarray where at least one element is KPP NA, generating an expression profile of a sample containing comprised and an array comprising different nucleotide molecules or polymucleotide sequence specifically hybridisable with at least 30 affixed in distinct physical locations on a solid substrate (where at least one of the nucleotide molecules comprises a first oligomucleotide contiguous nucleotides of a target KPP NA). The kinases and phosphatases of polymucleotides or preventing discorders and phosphatases (KPP) polypeptides, polymucleotides, agonists and antagonists are useful for dispancing, retaining or preventing discorders (seq. Contiguous nucleotides, alternation or cancer), developmental disorders (real tubular expression of KPP, particularly cell proliferative disorders (e.g. thromobovytopeania or mencer), developmental disorders (real conternal nemmoglobinuria, polycythaemia vera, psoriasis, prinary thromobovytopeania or mencer). Alevelopmental disorders (e.g. Albeiner's disease, parkingon's disease or epilepsy), autoimmum autoimmum thyroiditis, contact demaritis, Craves' disease, parkingon's disease or epilepsy), autoimmum autoid arthritis, sogeren (sequences of proteins associated con the expression of nucleic acid and as sequences of proteins associated con the expression of nucleic acid and as sequences of proteins associated con the New human kinases and phosphatases and polynucleotides, useful for diagnosing, treating or preventing autoimmune or inflammatory disorders (e.g. AIDS, allergy or anemia), multiple sclerosis, osteoarthritis, cancer or hepatitis. ίχ, He A, Au-Young JK, Lee SY; VS, Ison CH, Yang J, Lee EA, Li J) Warren BA, Hafalia AJA, Marquis JP; Claim 1; Page 159-160; 199pp; English. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 12,

Sequence 12, Application US/08909983

Sequence 12, Application US/08909983

GENERAL INFORMATION:

APPLICANT: Rubin, Gerry M.

APPLICANT: Chang, Henry C.

APPLICANT: Karim, Felix D.

APPLICANT: Wassarman, David A.

TITLE OF INVENTION: A No. 5747288el Protein Kinase Required for Ras

TITLE OF INVENTION: Signal Transduction

NUMBER OF SEQUENCE: 12

CORRESPONDENCE ADDRESS:

ADDRESSEE: SCIENCE TECHNOLOGY LAW GROUP
